

Making a Lasting Impression for Over 80 Years

E1- King Brinell Microscope

Constructed from stainless steel, the rugged and optically reliable KingScope is the most versatile microscope on the market today.

Featuring 20x pre-focused lenses, the KingScope has a narrow nosepiece which easily fits into right tight recesses, resulting in less grinding on castings, billets, and dies. For added stability when performing on flat surfaces, a slip-on base adapter is included. A side opening in the microscope allows natural light for viewing, and a cordless movable penlight can be used in dim conditions. The unit also includes a case.

Calibrated on equipment traceable to NIST standards, the King Brinell microscope meets ASTM E-10 specifications.

E2- KingScope 100

The KingScope 100 provides excellent accuracy with resolution at .01mm. with a large easy to hold base and a small foot print the KingScope 100 is ideal for portable daily use. The shape is ergonomic and friendly and it fits comfortably in your hand. This feature makes the KingScope 100 easy to steady on an image and comfortable to work with. It is made of lightweight and rigged material so while easy to carry it will withstand harsh environments for many years of use. Focusing the scope is easy and quick and the built in LED illumination which is powered by a single AAA battery provides more than adequate light and lasts for thousands of hours of use. The KingScope 100 comes standard with an anti glare filter making image capture and reading a breeze.
